About this catalogue

The catalogue follows the pack's configured contents. A particular player may have selected different optional mods.

Requires lists mods this mod needs. **Optional integrations** lists mods it can work with. **Used by** lists other mods that need this one. **Optional dependency of** is the corresponding reverse list for optional integrations. Empty relationship groups are omitted.

Descriptions are supplied by mod authors, either in the installed file or on the linked page. Versions and dependency declarations come from the pack's hash-verified files. The accompanying Markdown and JSON retain the exact declarations, version ranges and source evidence.

A declaration is not a guarantee of compatibility. Included libraries may have several copies; Minecraft's loader selects which to use. A mod marked as absent from this catalogue may be supplied another way. Unscoped declarations come from nonstandard metadata and are not presented as enforced requirements.
